New Convergent Solution

The Hytera Multi-mode Advanced Radio is a revolutionary device in the private radio network industry. The first of its kind to offer a truly convergent platform for critical voice and broadband data services, this innovative development is a significant milestone. The radio supports multi-mode communication in different scenarios, whether it's daily business operations or emergency response, broadband or narrowband, utilising the public or private network.

Offering the user a truly unified communication experience. The rich applications and high-level data security ensures the radio calmly handles any critical situation, improving co-operation and seamless communication.

The ergonomic design combined with the rugged chassis and touch-screen supports a new sensory experience to meet your diversified requirements. You can listen and see clearly, operate and transmit securely and utilise your improved situational awareness to respond and achieve quickly and effectively.

Product Overview

Sense

The Hytera Multi-mode Advanced Radio delivers excellent situational awareness, smartly detecting the surrounding environment, providing alerts and acquiring data in real time. Communicating continuously with back-end systems, you can improve your operational effectiveness with instant feedback and informed decision making. The device will become the extension of your senses, assuring your safety and enhancing your response with on-demand services.

Seamless

Whenever and wherever you are operating, the Hytera Multi-mode Advanced Radio is by your side offering a great voice communication experience. Seamlessly switching between networks, the intelligent device manages multiple communication modes, presented in a dedicated, user-friendly interface, to ensure that you can enjoy a seamless communication experience while the handset takes care of network transitions.

Supervision

Security of personnel and your voice or data transmissions is critical no matter the application. The Hytera Multi-mode Advanced Radio is designed to provide holistic secure control of your communications, adopting an effective link between the radio and back-end systems. There is no need to worry about data security, device loss, evidence management or command availability as the handset delivers a brand-new encrypted control system.

Diverse Connections

Wired connection: accessory pins
Wireless connection: Wi-Fi, NFC and BT

Sensors: proximity sensor, ambient light sensor, 6-axis E-compass, barometer sensor, gyroscope, accelerometer sensor
Positioning systems: GPS, BDS, GLONASS

Function & Technical Features

Open Secondary Development Interface to Enrich Services and Applications

Provides application development kit (ADK) based on the radio for the third party to customize their own applications. Consequently, it would integrate all mobile resources to build a modern work platform. Now it is not only a radio, but a smart mobile device.

Government and Public Security

Public Utilities

Metro and Railway

Broadband and Narrowband Converged

The narrowband switches between digital and analog, the broadband supports all mobile networks, and the two systems collaborate to guarantee a smooth communication.

Clear and Pleasant Critical Voice

The radio adopts advanced audio technology, such as multi-mic noise suppression, acoustic echo cancellation and wind noise suppression, to ensure the receiver hear clear voice even in noisy environment.

Multiple Security Assurances

Support authentication, software and hardware encryption to prevent voice and data theft. The management system real-time monitors the radio. Radio stunning, killing or data erasing are available in case of abnormality.

Quick Charging

The smart battery supports a charging which is three times faster than the common one: 80% in 30 minutes, while 100% in one hour.
